

Join us for another fun session of SciGirls, with all new experiments, activities, and mentors! SciGirls is a hands-on, collaborative class which gives girls ages 10-15 the opportunity to gain confidence in the sciences. Through experiments, challenges, and career exploration, the girls will gain new insights into various scientific fields. Your daughter can expect to:

- Learn about productivity, efficiency, and quality in engineering through a hands-on activity. There **may** be a little friendly competition involved!
- Solve a crime using techniques from soil, document, fiber, (simulated) blood, fingerprint, and hair analysis
- Be given the challenge to design and test experiments in the fields of physics, biology, and ecology
- Learn about space in a creative way
- Complete one super fun research project
- Make close friendships through weekly group activities
- And so much more!

We will end the semester with a Christmas party. Everyone in class should plan on bringing a \$10 gift to exchange.
